

UMOH ISAAC

Data Analyst | Machine Learning Engineer | BI Developer Lagos, Nigeria |
isaacujay@gmail.com | github.com/ISAAC-Neumoton

Professional Profile

Results-driven Data Analyst, ML Engineer, and BI Developer with hands-on experience turning complex commercial data into revenue strategy. Specializes in auditing sales pipelines, isolating marketing ad spend leaks, optimizing supply chain logistics, and deploying predictive models to prevent customer churn. Proven capability in bridging technical engineering with data-driven business decisions from first principles.

Core Technical Expertise

- ✓ **Languages & Environments:** Python, Pandas, NumPy, Regex, Jupyter Lab, VS Code, GitHub Codespaces, etc.
- ✓ **Database Engineering & SQL:** SSMS, SQLite, Relational Schema Design, Window Functions, CTEs, pyodbc, SQLAlchemy
- ✓ **Business Intelligence (BI):** Power BI Desktop, Advanced Excel, Dynamic Pivot Tables, Logical Formulas, Slicers
- ✓ **Analytics & Modeling:** RFM Customer Segmentation, Cohort Analysis, Predictive Modeling, scikit-learn, NLP Sentiment Scoring

Professional Soft Skills

- ✓ Communication (English)
- ✓ Leadership
- ✓ Problem-Solving & Critical Thinking
- ✓ Strategy
- ✓ Discipline & Execution
- ✓ Adaptability

Credentials & Technical Training (2026)

- ✓ **Data Science Lab Professional Certificate** | WorldQuant University (WQU) — *July 2026*
- ✓ **Data Analysis Internship Certification** | CodeAlpha — *June 2026*
- ✓ **Advanced SQL Course** | Baara — *February 2026*
- ✓ **SQL Study Group Training** | SmartBIZCrux — *January 2026*
- ✓ **Excel Study Group Training** | SmartBIZCrux — *October 2026*

Technical Project Portfolio

Brazilian E-Commerce Multi-Dimensional Performance Pipeline | *CodeAlpha Intern*

- **Objective:** Built an end-to-end analytics and predictive ML pipeline from a 9-CSV relational database to isolate key drivers of sales performance and customer abandonment metrics.
- **Execution:** Connected Python to SQL Server via SQLAlchemy; engineered tracking features like shipping-to-price ratios and delivery deltas; deployed NLP Transformers for customer review sentiment scoring.
- **Impact:** Delivered a scikit-learn regression pipeline with SHAP explanation alongside an interactive Power BI dashboard to guide executive-level marketing spend, pricing elasticity, and fulfillment policies.

Healthcare Operational Capacity & Financial Risk Analytics | *SQL Developer & Analyst*

- **Objective:** Programmed a clinical operation engine to profile patient data quality and resource utilization.
- **Execution:** Handled advanced schema audits using SQL window functions and CTEs; wrote scripts to identify missing data trends and catch orphan records across medical procedures.
- **Impact:** Isolated length-of-stay (LOS) statistical outliers and mapped insurance payer market shares to flag structural financial risks and eliminate departmental operational bottlenecks.

Customer Intelligence: RFM Segmentation & Churn Prevention | *BI Developer*

- **Objective:** Extracted historical transaction metrics to maximize long-term buyer retention and lifetime value.
- **Execution:** Built analytical database queries in SQL to parse user Recency, Frequency, and Monetary (RFM) layers; classified users into clear behavioral cohorts (Champions, At-Risk, Hibernating).
- **Impact:** Designed a user-friendly, interactive Excel executive tracking dashboard with dynamic pivots and slicers, enabling sales teams to proactively flag and target churning customer segments.

Global Tech Labor Market Exploratory Analytics Framework | *Python Data Wrangler*

- **Objective:** Engineered an exploratory data script to clean and normalise messy, unstructured job board data.
- **Execution:** Wrote automated regular expression (Regex) cleaning filters in Python to handle raw text blocks, purge duplicate records, and standardize unstructured geographical metadata.
- **Impact:** Surfaced high-demand technical toolsets, salary distributions, and cross-platform recruiting behaviors across remote vs. on-site organizational models.
